

Summary of the pro project

The goal

During my training at La Plateforme, I developed a mobile chat application using React Native. My goal was to create a simple and user-friendly platform for people to connect and communicate with each other. I didn't have a specific target audience in mind, and I wanted the app to be open and accessible to everyone, providing a space for relaxed and honest conversations. To develop the app, I used the React Native Framework, Additionally, I utilized NodeJs coupled with ExpressJs for API development. Overall, the experience allowed me to gain valuable insights into mobile app development and further develop my skills in React Native.

Description of the existing

There are already many Chat applications allowing users to communicate with each other through messages such as Whatsapp or google chat.

Target aimed by the chat

The chat is primarily for everyone.
